                                                                                                               NOTE: This is a 'working draft' sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 60 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Cancer associated antigen; KOC-1; cancer; vaccine; CT7; PCR primer; ss. old LJ; PCR primer for DNA encoding cancer associated antigen KOC-2. Knuth A, ы Jager Stockert E, (LUDW-) LUDWIG INST CANCER RES BP. 99WO-US05766 98US-0061709 Gure A, Tsang S, (first entry) Homo sapiens. 16-MAR-1999; 17-APR-1998; WO9954738-A1 11-FEB-2000 28-OCT-1999.

```
The present sequence represents a cancer associated antigen gene designated KOC-2. The specification also describes a cancer associated antigen designated cT7. The CT7 polymucleotide was isolated from SK-MEL-37 melanoma cells. The polympeticide has some homology with MAGE-10, limited to about 210 carboxy terminal amino acids. The amino terminal of the protein has a repetitive pattern, with repeats rich in the proline, glutamine and leucine, and an almost invariable core of the peptide given in AAX43877. The CT7 polypeptide can be processed to peptides which provoke lysis by cytolytic T cells. The polymucleotides and polypeptides can be used for treating a cancerous condition and acreening for or diagnosing annexous conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an
                            per primers AAZ36157-58 were used to amplify a cancer associated antigen gene designated KOC-2. The specification also describes a cancer associated antigen designated CT7. The CT7 polynuclectide was isolated from SK-MEL-37 melanoma cells. The polypeptide has some homology with MAGE-10, limited to about 210 carboxy terminal amino acids. The present sequence represents an alternative form of a cancer associated antigen gene designated KOC-2. The specification also describes a cancer associated antigen designated CT7. The CT7 polymucleotide was isolated from SK-WEL-37 melanoma cells. The polympetide has some homology with MaCB-10, limited to about 210 carboxy terminal amino acids. The amino terminal of the protein has a repetitive pattern, with repeats rich in serine, proline, glutamine and leucine, and an almost invariable core of the peptide given in AAV43877. The CT7 polypeptide can be processed to peptides which provoke lysis by cytolytic T cells. The polymucleotides and polypeptides can be used for treating a cancerous condition and screening for or disposing treating.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony stimulating factor (GM-CSF).
adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony stimulating factor (GM-CSF).

Human cDNA libraries from various tissues were screened for GTPase associated proteins (GTPAP). The present sequence is cDNA encoding human GTPAP-20. This sequence was derived from a cDNA library of the wrist synovial membrane tissue from a female with rheumatoid arthritis. This protein is expressed in reproductive, nervous and gastrointestinal tissue. The GTPAP proteins may be used to define agonists and antagonists of GTPAP proteins may be used to define to GTPAP. This means the GTPAP proteins may be useful for treatment or prevention of diseases associated with GTPAP such as cell proliferation disorders, autoimmune disorders, inflammatory disorders, immune system disorders, cancer, ADS, asthma, atherosclerosis, arthritis, systemic
                                                                                                                                                                                                                                                                                                                                                                                                                                         useful for diagnosing, preventing and treating various diseases such atherosclerosis, cancer, acquired immune deficiency syndrome (AIDS), asthma, and autoimmune diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) canino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) cativity, and can be used in gene therapy and vaccine production. (I) cativity, and polymucleotides may be used in the prevention, diagnosis and proteins and polymucleotides associated with inappropriate (I) expression. For expression by nectifying mutations or deletions in a patient's genome contact affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) cupplement the patients own production of (I). Additionally, (I) colymuclectides may be used to produce the secreted (I), by inserting proteins and polymuclectides may be used to produce the call to express the cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cancers and cancer metastases of haematopoietic antigen genomic concerns and cancer metastases of haematopoietic antigen genomic concerns and cancer metastases of haematopoietic antigen genomic represent human immune/haematopoietic antigen genomic represent sequences used in the exemplification of the present invention.

New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Drosophila; developmental biology; cell signalling; insecticide; pharmaceutical; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and inseful interactions in higher ewkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL9737-ABR2072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

canino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic

activity, and can be used in gene therapy and vaccine production. (I)

creatment of diseases associated with inappropriate (I) expression. For

treatment of diseases associated with inappropriate (I) expression. For

creatment of diseases associated with decreased

expression by rectifying mutations or deletions in a patient's genome

creatment the patients own production of (I). Additionally, (I)

cupplement the patients own production of (I). Additionally, (I)

creatment cids into a host cell and culturing the cell to express the

protein. (I) proteins and polynucleotides may be used to prevent,

cancers and cancer metastases of haematopoietic related diseases, especially

diagnose and treat immune/haematopoietic-derived cells. AAK64703

cc cancers and cancer metastases of haematopoietic antigen genomic

to AAX87694 represent human immune/haematopoietic antigen genomic

crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and insecticides, theractions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                         Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                             Drosophila melanogaster genomic polynucleotide SEQ ID NO 37231.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1; SEQ ID NO 37231; 21pp + Sequence Listing; English.

these toxic Predicting toxic effects of compounds or the progression of these tox effects by determining the changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells -

Claim 1; Seq ID No 1454; 239pp; English.

The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the compounds or the progression of these toxic effect by determining the toxin and comparing these to gene expression in unexposed tissues or cells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the expression in a tissue or cell sample exposed to the compound of two or more genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression of the method can also be used to identify an agent which modulates the coxic response and predict cellular pathways that a compound modulates to in a cell. The methods utilise a set of at least two probes (on a solid support in kit form), where each of the probes comprises a sequence that support in kit form), where each of the probes comprises a sequence that support in kit form), where each of the probes comprises a sequence that support in kit form), where each of the probes comprises a sequence that support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer captession level in a tissue or cell sample expression level in a tissue or cell sample expression and tox identifying the expression and for identifying toxicity markers in dentification of the physiological state of the phase of the contract of the physiological state of the phase of cell exposed to a known toxin. The genes and toxicity markers for the seminal proportion or identification of the physiological state of the phase of cell capted to a known toxin. The genes and toxicity markers in dentification or identification of the physiological state of the phase of cell capted to a parameter of the phase of cell capted to a cell of a cell of the phase of the phase of the phase of the phase of the phase of the phase of the phase of the phase of the pha from a gene sample that has been exposed to a compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or cDNA derived from a genwhich is differentially expressed in response to a hepatotoxic agent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (1) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (1). The method is useful for examining the ischaemia condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases.                                                                                                                                                                                                                                                                                                                                                                                                               A Sau3A human genomic DNA bank was screened with two rat D3 receptor probes to identify open reading frames. The rat D3 probe #2 containing the coding sequence for the C-terminal part and transmembrane domains VI and VII of rat D3 identified 1 positive clone. The sequence given here corresponds to part of the 3 region of the human D3 gene. This sequence is one of the preferred fragments able to code for a polypeptide with the properties of the human D3 receptor. The sequence is also useful as a probe to diagnose e.g. pathological expression of the D3 receptor, polymorphism of the D3 receptor gene or point mutations.

```
This ORF codes for a mutant D3 receptor with four amino acid substitutions relative to the wild-type receptor sequence (two of the nucleotide substitutions are silent). The mutant receptor retains its dopaminergic receptor properties. The mutant containing all the mutations in the Features Table is preferred but mutants which contain at least one of the mutations are also covered by the

of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access medium, preferably selected from a floppy or hard disk, random access the S.aureus DNA sequences allows puterive functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic that protein-encoding or regulatory regions of commercial, therapeutic industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can also be used in a kit for the immunodetection of sources in a sample. S.aureus is a implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, surfacement and surgical wound infections, scalded skin syndrome, toxic shock for recombinant production of the polypeptides. The new DNA sequences can be used (and their fragments) are useful as primers or probes for isolating computer readable medium.
                                                                                                      /*tag= a //*tag=                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    sequence represents one of 5191 Staphylococcus aureus DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The present sequence is the human D2 receptor CDNA. The sequence was expressed in the same cell line as the putative rat D4 receptor gene in a method to confirm that the putative D4 receptor does code for a deparative receptor does code for a second companied by the part of the putative D4 receptor. The rat D4 receptor was shown to preferentially bind dopamine antagonists such as clozapine. The D4 receptor CDNA is useful for screening drugs which specifically bind to the receptor and have selective effects on the cardiovasculature and retinal tissues through interactions with the receptor. Such compounds may act as vasoregulators or may have ionotropic effects. The D4 receptor protein may be used for the production of polyclonal or monoclonal antibodies which receptors the dependence but do not recognise other dopamenergic receptors. The antibodies may be used in immunocytochemical studies and for identification and isolation via flow
                                                                                                                                                                                                                                                                                                                                                                                              screening for compounds that selectively bind to a rat D4 dopamine receptor (DDR), useful for identifying dopamine (ant)agonists, comprises exposing cells transfected with a nucleic acid encoding the DDR to candidate compounds

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1201, Application US/09938842A

Patent No. US20020160378A1

GENERAL INFORMATION:

APPLICANT: Harper, Jeff
APPLICANT: Wang, Xun

TILLE OF INVENTION: STRESS-REGULATED GENES OF PLANTS, TRANSGENIC PLANTS CONTAINING

TITLE OF INVENTION: SAME, AND METHODS OF USE

CURRENT APPLICATION NUMBER: US/09/938,842A

FILE OF INVENTION: SAME, AND 60/227,866

FRIOR APPLICATION NUMBER: US 60/227,866

FRIOR PRILING DATE: 2000-08-24

FRIOR FILING DATE: 2001-08-24

FRIOR FILING DATE: 2001-01-16

FRIOR FILING DATE: 2001-01-16

FRIOR FILING DATE: 2001-01-01-16

FRIOR FILING DATE: 2001-06-22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 N: EXPRESSED IN FETAL LIVER, SIGNAL = 5.3

It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence * as soon as it is available and the accession number will * be preserved.

It currently consists of 12 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced

by the finished sequence as soon as it is available and the accession number will be preserved.

1 1013: contig of 1013 bp in length
